CAMPAIGN HQ · SIMULATION

₹2,000 cannot buy 500 seats. A flywheel can.

Unit economics first. ₹2000 ÷ 500 = ₹4 per registration. Edtech CPC in India is ₹12–40. Paid social is not a channel. It is a rounding error with extra steps.

How 500 comes in

Day 1 seed	120	15 NxtWave internal groups + 50 captains confirmed. Brand graph, not ads.
Class-group posts	210	50 captains × ~70 members × 12% tap × 50% register. Posted at 8:30pm, not 11am.
Referral hop	100	Every seat opens a 'bring 2 classmates' ticket. 35% send. 40% of invited register.
TPO + leaderboard	70	10 placement cells forward once. Public college board creates the only FOMO that works.
Total	500	Buffer above 500 on purpose. Class groups overlap.

Where the ₹2,000 goes

₹0 on ads. ₹2,000 = 10 × ₹200 data packs for the top 10 captains, paid UPI the day the workshop ends. Tournament, not participation trophy. Status (public board) is the real incentive; rupees make the contract feel adult.

The actual distribution asset is NxtWave's college graph. Pretending we are a cold startup would be leaving the unfair advantage on the table.

Channels — four, not twenty

Class WhatsApp groups
Primary. The only feed they actually read. 74 classmates, one admin, one forward. Trust sits next to them in the lab.

Campus captains
The salesforce. 50 people, not a page. A captain is a distribution node with a name. A poster is not.

Placement cell (TPO) WhatsApp
One message, 10 colleges, Day 3 only. Highest-trust sender in a final-year phone. Used once so it does not feel like spam.

NxtWave existing student graph
Day 1 seed. Unfair advantage. 2L+ learners, 3000 colleges. Pretending we are a cold startup would be leaving the actual asset on the table.

7 days

D0
Freeze the asset
Landing, 3 WhatsApp variants, captain brief, leaderboard live. No more creative.

D1
Seed captains
DM 80 students from NxtWave's college graph. Offer: top 10 captains get ₹200 same week. Target: 50 yes.

D2
First posts
Captains post in class groups at 8:30pm. We reply with live college counts. Target +180.

D3
Fill holes
Colleges with <3 seats get a replacement captain. 10 TPOs get one WhatsApp, not a deck.

D4–5
Leaderboard
Screenshot 'CBIT 41 · GRIET 38' into groups. Referral prompt on every ticket.

D6
Shortage
Remaining seats, remaining colleges. No new copy. Inventory is the message.

D7
Lock
Calendar invite, 6pm reminder, pay top 10 captains on UPI the same day.

Three tests, each with a kill number

T1 · Headline

Hypothesis — A GitHub/project frame converts at least 2× a 'learn AI' frame, because the job-to-be-done is a resume artefact, not education.

Test — 50/50 split on the landing hero for 48 hours. A: 'Learn AI in 60 minutes'. B: 'Walk out with a GitHub project tonight'.

Metric — Register CVR (seats / unique landing sessions). Kill A if B ≥ 1.6× after 400 sessions.

T2 · Share loop

Hypothesis — A post-register ticket with a one-tap WhatsApp message produces k ≥ 0.6. A thank-you page without a share object produces k ≈ 0.1.

Test — After seat 1–150, show the ticket + copy-ready class message. Measure invites sent and 2nd-degree seats.

Metric — k-factor = (invite taps × invitee CVR) / registrants. Kill the loop if k < 0.3 by end of Day 3 and switch to more captains.

T3 · Branch-native project

Hypothesis — ECE/Mech students convert when the project is named for their week (placement, not 'ML pipeline'). CSE is already over-workshopped.

Test — Landing branch picker changes the proof line. Compare ECE+Mech CVR vs CSE CVR vs a generic control in 3 captain groups.

Metric — CVR by branch. Success: non-CSE CVR within 20% of CSE. Fail: non-CSE < half of CSE — then we were still talking like a coding bootcamp.

What I refused

Spend ₹2,000 on Meta / Instagram ads

₹2,000 ÷ 500 = ₹4 per seat. Edtech CPC in India is ₹12–40. The math is not tight. It is impossible.

12-channel spray: email, LinkedIn, Instagram, Telegram, clubs, YouTube, fests

The brief said prioritise. Twelve channels is a list, not a plan. One loop, one hour-of-day, one incentive.

Target only CSE

CSE is over-workshopped. ECE/EEE is ~40% of engineering seats and has the project gap. 500 cannot be fished from the noisiest pond.

Build a chatbot as the working asset

> Students will not open a new bot. They will open a forward. The asset has to live inside WhatsApp, not next to it.
