0:00–0:25

The brief is 500 final-year engineers in 7 days with ₹2,000. I started with the unit economics, not the poster. ₹2,000 divided by 500 is ₹4 a seat. Meta CPC for edtech in India is ₹12 to ₹40. Ads are not 'expensive'. They are impossible. So the plan cannot be media. It has to be a loop.

0:25–1:05

The student is not 'final-year engineers'. She is Rishika, ECE, 8th sem, GRIET. Zero GitHub repos. Placement talk on Thursday. She does not want to learn AI. She wants a sentence she can say in an interview. CSE is already drowning in workshops. ECE and Mechanical still have the project gap — and they are most of the seats. That is who the landing page talks to.

1:05–1:50

The campaign is one idea: the 50×10 flywheel. Fifty campus captains, each bringing about ten classmates. Captains are paid with a tournament — the entire ₹2,000 is ten ₹200 data packs for the top ten, paid on UPI the same week. Distribution is class WhatsApp at 8:30pm, plus one TPO message, plus NxtWave's existing college graph as Day 1 seed. I killed email, Instagram, LinkedIn and clubs. Those are lists. This is a channel they already live in.

1:50–2:35

The working asset is SHIP60. It is not a pretty landing page. After you take a seat, you get a ticket and a WhatsApp message written in your class's language. The page is the salesforce. I also put ResumeFit on the page — the actual 60-minute project — so the promise is tryable in 20 seconds. If they don't believe 60 minutes, they should not have to take it on faith.

2:35–3:00

Three tests, each with a kill number. Headline: project versus learn-AI. Share loop: k-factor of 0.6 or we hire more captains. Branch-native copy: if

ECE converts at half of CSE, we were still talking like a bootcamp. I used AI to draft. I rejected ads, a 12-channel spray, CSE-only targeting, and a chatbot. Judgment is what I did not ship.

Close on screen: the ticket, then the college board. Last line, if you have 5 seconds: "I used AI to draft. I got the internship by deleting."
