AI + LEARNING NOTES

# Prompt → suggestion → what I refused → what shipped

Download PDF

The brief asked for judgment with AI in the room. The useful trail is not what Grok drafted. It is what did not survive contact with ₹4-per-seat math.

---

Example 01

WHAT I ASKED

How do I get 500 final-year engineering students to register for a free 60-minute AI workshop in 7 days with a ₹2,000 budget?

WHAT AI SUGGESTED

Run Instagram + Meta ads, post on LinkedIn, email placement cells, hit college clubs, Telegram, YouTube shorts, and a chatbot that answers FAQs. Suggested headline: 'Learn AI in 60 Minutes — Limited Seats!' Plus a Canva landing page with a purple gradient.

WHAT I CHANGED / REJECTED

Killed ads on unit economics (₹4/seat vs ₹12–40 CPC). Killed the 12-channel list — the brief said prioritise. Killed 'learn AI' because the job-to-be-done is a GitHub artefact, not education. Killed purple SaaS chrome. Kept one loop: captains × class WhatsApp × ticket that forwards.

FINAL

50×10 flywheel. Entire ₹2,000 as a captain tournament. SHIP60 as the working asset — register, ticket, WhatsApp script. Headline: 'Your GitHub is empty. Interviews are not.'

---

Example 02

WHAT I ASKED

Who exactly should we target? Write a student persona for this workshop.

WHAT AI SUGGESTED

A generic 'tech-savvy Gen-Z CSE student in India who loves AI, follows influencers, and wants to upskill for a high-paying software job.' Recommended targeting metro CSE only, because they convert on

AI content.

WHAT I CHANGED / REJECTED

CSE is the noisiest pond and already workshop-fatigued. 500 seats cannot come from people who already have three Udemy certificates. ECE/EEE/Mech at Tier-2 colleges have the project gap and sit in dense class groups. Persona has a name, a college, a group size, and a Thursday placement talk — or it is not a persona.

FINAL

Rishika, 22, ECE 8th sem, GRIET. 0 repos. Class WhatsApp of 74, active 8:20–10:40pm. She registers because a classmate forwarded a named project, not because she 'loves AI'.

---

Example 03

WHAT I ASKED

What working asset should I build? Landing page, Figma, bot, or automation?

WHAT AI SUGGESTED

An AI chatbot that counsels students toward the workshop, plus a 12-screen Figma marketing kit, plus Instagram story templates. Optional: WhatsApp Business API chatbot with a 40-intent tree.

WHAT I CHANGED / REJECTED

Students will not open a new bot. They will open a forward from the person on their left. A Figma kit is not a working asset — it cannot take a seat. WhatsApp Business API in 7 days with ₹2,000 is theatre. The asset has to live inside the channel: a page that issues a ticket and a paste-ready class message.

FINAL

SHIP60. Branch picker, ResumeFit demo (the 60-minute project, tryable), 20-second form, post-register ticket + EN/HI/TE script, captain kit, public college board. AI rewrite is optional seasoning on a locked script — never the strategy.
